ET us improve our home and make every spot within and without a pleasure to the beauty-loving eye. To help create beauty in the world is to help God's ideals.

"We have an earthly Eden, and we must try to grow worthy of it by developing all its charms."

MAR 18 1921

Landscape) Department

OME Architecture, Interior Decoration and Landscape Development have become such important factors in home building that the complete American home of today is a logical combination of these three branches of art.

Appreciating the growing demand for a well equipped Landscape Service, we have made ours second to none. Our landscape department is prepared to take up all phases of landscape development and invites inquiries regarding the development of parks, cemeteries, real estate sub-divisions, play grounds, private estates, as well as the more modest city or suburban grounds.

Where a logical and economical arrangement is desired, it is highly important that every landscape proposition should have a definitely prearranged plan. Attractive landscape effects do not happen spontaneously, but are the result of a careful study and deliberate forethought.

In order to avoid serious errors involving expense and loss of time, our Landscape Department can be of invaluable service even before any preliminary arrangement is made regarding the grading, drainage or planting problems.

Upon the acceptance of the necessary plans, specifications, reports, etc., we are then prepared to complete the proposed development under the careful supervision of our expert land-scape plantsmen.

We consider it a pleasure to offer suggestions, without charge, to intending purchasers, but where landscape problems require special visits, plans, reports, specifications, etc., a reasonable charge is made, consistent with services rendered.

HOME LANDSCAPE

HE word home means vastly more than just a place to live. There is a deep, subtle meaning to this word which implies cheerful surroundings, cordial relations, industrial habits, and a place where love and friendship abound.

In defining this word we use cheerful surroundings first because our surroundings greatly influence our relations, habits and even temperaments.

The home is the unit of civilization. Make ours a nation of homes, and we will have built as a bulwark, a strong, substantial citizenship against which no social upheaval can prevail.

COMMUNITY LANDSCAPE

OMMUNITY landscape development embraces all plantings which are made for the benefit of the public, and not solely for private interests.

Under this heading may be included parks, playgrounds, hospitals, churches and public buildings.

The effect of attractive grounds surrounding such institutions is most inspiring; not only creating local pride and community spirit, but giving a favorable impression of the community to all strangers passing through.

Appreciating the benefits to be derived by good planting, many communities are now taking up work of this kind. The following is a representative list of community problems which we have recently worked out.

The Manhattan State Hospital, Ward's Island, N. Y. Bridgeport Housing Co., Bridgeport, Conn. Waterbury Housing Co., Waterbury, Conn. Scovill Housing Co., Waterbury, Conn. First Church Christ Scientist, New Haven, Conn. Sacred Heart Church, New Haven, Conn. Sacred Heart Church, Bridgeport, Conn. Rockville Savings Bank, Rockville, Conn. Danbury Savings Bank, Danbury, Conn. Derby Hospital, Derby, Conn. Dr. Robert E. Peck's Sanatorium, Woodmont, Conn. Derby Railroad Station, Derby, Conn. Stamford Railroad Station, Stamford, Conn. Two Public Parks, Beacon Falls, Conn. Private Parks, Henry Trumbull and others, Plainville, Conn. Racebrook Country Club, Orange, Conn. Brooklawn Park Asso., Bridgeport, Conn. Maple Hill Cemetery, Franklin, Kentucky. Two Waterbury High Schools, Waterbury, Conn. Five Waterbury Grammer Schools, Waterbury, Conn.

A portion of the Grounds of "The National Cash Register Co.," One of the First Factories to Improve its Grounds

INDUSTRIAL LANDSCAPE

WELL LAID-OUT FACTORY GROUNDS with ample lawn areas, attractive trees and well placed masses of shrubbery lends a superior air of dignity to the article manufactured. Three well-known factories, -The National Cash Register Co., Horlick's Malted Milk Co., and The Shredded Wheat Co., have been pioneers in appreciating this fact. Not many years ago manufacturers would have considered much of their present-day welfare work a waste of money and a matter which did not concern the management. But now industries are really competing with each other in making their plants more safe, healthy, and attractive. Nor is the mere external beauty the only benefit to be derived. Attractive grounds make a factory less shop-like and more inviting to the help, thus lessening the annual turn-over of labor and encouraging a better class. Even when the area is not sufficient for further plantings, the walls may at least be covered with clinging vines which greatly relieves the glare of light and during the summer months tends to reduce the temperature within the building.

What a contrast this picture offers compared with the bare walls and unkept surroundings of the average factory

INDUSTRIAL LANDSCAPE

Improving factory grounds is not so much a problem of large areas to be planted as one of taking advantage of any waste ground which might be used for growing some kind of vegetation. Even when a factory is located on a street line, a small strip of grass and a row of shade trees works wonderful improvement in appearances. Many factories today are using a cut of their plant on letter heads and for other advertising purposes. Most of these cuts show attractive landscape effects in connection with the buildings, when in reality they do not exist. Why not actually carry out these plantings which the artist has considered necessary to complete a picture of your factory?

Some of the factory grounds we have developed.

The Beacon Falls Rubber Shoe Co., Beacon Falls, Conn.

The Scovill Mfg. Co., Waterbury, Conn.

The R. & G. Corset Co., South Norwalk, Conn.

The Ball & Socket Co., Cheshire, Conn.

The S. O. & C. Co., Ansonia, Conn.

The Kolynos Co., New Haven, Conn.

The Baird Machine Co., Bridgeport, Conn.

The International Silver Co. (two factories), Wallingford, Conn.

The A. N. Phillips Chemical Co., Stamford, Conn.

The Holmes & Edwards Silver Co., Bridgeport, Conn.

The Semon Ice Cream Co., New Haven, Conn.

The American Fabrics Co., Bridgeport, Conn.

Homer D. Bronson Co., Beacon Falls, Conn. The Osborne-Schneller Co., Ansonia, Conn.

American Steel & Wire Co., New Haven, Conn.

Our Nurseries

HE close co-operation between our Nursery and Landscape Departments is a factor worth considering by anyone contemplating landscape developments.

We grow, in our nurseries, the planting materials necessary in creating attractive and satisfactory landscape effects. Years of experience in continual association with plants have taught us many things in connection with plant life which are fundamentally necessary for working out planting effects in a manner which meet all requirements. This is, in itself, worthy of consideration and assures you of our ability to serve your needs in an entirely satisfactory manner.

An Attractive Entrance Effect Dominated by Beautiful Old Elms

Deciduous Trees

A MONG the large number of trees we are growing we always have on hand some which are not perfect specimens. The trunks may be crooked or the heads uneven. These trees are just as thrifty and vigorous as the perfect specimens, and are well suited for grouping and mass planting effects. To those who prefer such trees, we shall be glad to submit special prices.

DECIDUOUS TREES			Each	Per 10	Per 100
ACANTHOPANAX RICINIFOLIUM (Aralia)		8 feet		\$22.50	
Rare tree, tropical foliage, very desirable.	4 to 3 to			$\begin{vmatrix} 10.00 \\ 9.00 \end{vmatrix}$	\$80.00

THE ELM CITY NURSERY COMPANY

Evergreens effectively used in connection with broad-leaf varieties, make this planting a most attractive one

Evergreens.

WE ALWAYS have in our blocks of evergreens, some plants which are not strictly specimens. These may be thin on one side or raised a little high from the ground. These plants are healthy, well rooted, and will work in economically for mass plantings and windbreak effects. We shall be pleased to quote special prices to those who are interested in evergreens of this kind.

EVERGREENS		Each	Per 10	Per 100
this native evergreen and its numerous varieties are among our most useful of evergreens. Easy to transplant and thriving on a variety of soils. 5 to 4 to 5 to 6 to 7	\$5.00 to 7 feet 6 6 feet 7 feet 7 feet 7 feet 7 feet	$\begin{array}{c} 5.00 \\ 3.50 \\ 2.50 \\ 1.50 \end{array}$	\$45.00 30.00 22.50 12.50 9.00	\$200.00 100.00 75.00

THE ELM CITY NURSERY COMPANY

The effective use of vines in connection with other plantings, has, in this instance, done much to relieve the bareness of the wall and harsh architectural lines of the house.

Vines.

HARDY VINES are invaluable for covering porches, pergolas, walls, fences, also for screening objectionable views. Their graceful habit and great variety of beautiful flowers and foliage make them charmingly attractive all through the season.

HARDY VINES		Each	Per 10	Per 100
ACTINIDIA ARGUTA or Silver-Sweet Vine.	4			
Specimens, 3 to 8			0	
Very rapid growing vine, desirable for arbors, pergolas, etc.	2 to 3 feet	.75	\$5.00	
AKEBIA QUINATA.				
One of the best vines for arbor or screen. Hardy,	4 to 5 feet	1.00	7.50	
vigorous and almost evergreen. The leaves are five	2 to 3 feet	.50	4.00	\$35.00
lobed.				
AMPELOPSIS ACONITIFOLIA.				
A handsome vine of very rapid growth, similar to the	2 to 3 feet	. 50	3.50	
native Woodbine. AMPELOPSIS HETEROPHYLLA VAR. ELEGANS	3 to 4 feet	.75	5.00	
Graceful, variegated foliage.	2 to 3 feet	.50	$\frac{3.00}{3.50}$	
AMPELOPSIS TRICUSPIDATA or BOSTON IVY	3 year	.75	6.00	50.00
Also known as Ampelopsis Veitchii; by far the most	2 year	.50	4.00	35.00
valuable vine which will cling to stone or wood.	J ,			-
AMPELOPSIS QUINQUEFOLIA or Woodbine	3 to 4 feet	.50	3.50	30.00
Woodbine or Virginia Creeper is a handsome vine and	2 to 3 feet	. 35	2.50	20.00
will thrive in the greatest variety of soils.				
AMPELOPSIS QUINQUEFOLIA VAR. ENGELMANII	3 to 4 feet	.50	3.50	30.00
Similar to Quinquefolia, but with smaller leaves. Will cling to walls.	2 to 3 feet	.35	3.00	25.00
ARISTOLOCHIA, see Dutchman's Pipe.				
BIGNONIA, see Trumpet creeper.				
BITTERSWEET AMERICAN (Celastrus scandens)	3 to 4 feet	.50	3.50	30.00
Native vine of great beauty.	2 to 3 feet	.35	3.00	25.00
BITTERSWEET JAPAN (C. orbiculatus)	3 to 4 feet	.50	3.50	30.00
Beautiful hedges are made by keeping this plant with-	2 to 3 feet	.35	3.00	25.00
in bounds by trimming.				
BOSTON IVY, see Ampelopsis Tricuspidata. CELASTRUS, see Bittersweet.				
CLEMATIS CRISPA	3 years	.75	6.00	
Old-fashioned garden favorite.	2 years	.50	3.50	
CLEMATIS FLAMMULA.				
Similar to Paniculata, and a good companion for it.	3 years	.50	4.00	30.00

A GIFT OF VINES FOR CHURCHES AND PUBLIC LIBRARIES

We will be pleased to donate from 3 to 10 nice stocky plants of Ampelopsis Veitchii (Boston Ivy.) This is the vine that grows so attractively on walls and turns a brilliant red in the fall. The understanding is that these vines are to be planted about the foundation wall of the church or public library buildings and given necessary care for their welfare. We would prefer applications authoritatively signed.

THE E L M CITNURSERY COMPANY

A very effective arrangement where hardy perennials have been used as a foreground planting to a massed grouping of trees and shrubs.

Herbaceous Perennials.

O group of garden flowers is dearer to the hearts of the people than what is usually classified as Hardy Herbaceous Perennials, including practically all of the interesting so-called old-fashioned garden flowers. Pæonies, Iris, Phlox, Poppies, Larkspurs, Foxgloves, etc., come under this classification.

Prices, unless otherwise noted:

Strong, field-grown, 25c. each, \$2.00 per ten, \$18.00 per hundred.
Smaller sizes, mostly field-grown, 20c. each, \$1.50 per ten, \$12.00 per hundred.
Clumps of some kinds, 50c. to \$1.00 each.
ÆGOPODIUM PODAGRARIA VAR. VARIEGATA. One foot. Splendid for covering the ground

ÆGOPODIUM PODAGRARIA VAR. VARIEGATA. One toot. Splendid for covering the ground under trees. Will grow almost anywhere.

ALYSSUM SAXATILE (Golden tuft). ½ to 1 foot. May and June.
Forms a clump of velvety foliage, flowers of the richest yellow, fragrant.

ARTEMISIA LACTIFLORA. 4 feet. July to October.
A charming plant bearing spikes of white flowers, beautiful dark green foliage.

ASTER NOVÆ-ANGLIÆ VAR. ROSEA. 2 to 5 feet. October to November.
A variety of our native New England aster, with very large flowers.

ASTER STOKES' (Stokesia lævis), 1 to 2 feet. July to September. Light blue.

ASTER TATARICUS. 3 to 4 feet. October and November. Blue flowers.

BABY'S BREATH (Gypsophila paniculata). 3 to 4 feet. July to October. Produces a mass of small white flowers forming a cloud of bloom. small white flowers forming a cloud of bloom.

BEE BALM (Monarda didyma var. superba). 2 to 3 feet. July to October. One of the old garden plants which will ever be popular. Brilliant scarlet.

BOLTONIA ASTEROIDES. 6 to 8 feet. August and September. Tall plant, producing great masses of aster-like flowers, white with yellow center.

BOLTONIA LATISQUAMA. 6 to 8 feet. August to September.

Similar to above excepting color, which is light lavender.

BOLTONIA LATISQUAMA NANA. 12 to 15 inches. August to September. A dwarf form of the above. A new and desirable variety.

the above. A new and desirable variety. BUTTERFLY-WEED (Asclepias tuberosa). 2 to 3 feet. July and August. Orange. A very

BUTTERFLY-WEED (Asclepias tuberosa). 2 to 3 feet. July and August. Orange. A very shown native plant and very desirable.

CHRISTMAS ROSE (Helleborus niger). 6 to 12 inches. October to March.

This plant produces its flowers in the winter, out of doors. Begonia-like blooms.

CHRYSANTHEMUM ULIGINOSUM (The Giant Daisy). 4 to 5 feet. July to September. Splendid plant for tall effects.

COLUMBINE ROCKY MOUNTAIN. (Aquilegia). In variety.

COLUMBINE EUROPEAN WHITE (A. vulgaris). 2 to 3 feet. May to June.

COREOPSIS LANCEOLATA (Tickseed). 2 to 3 feet. June to October. One of the best golden yellow flowers for the garden. Excellent for cut flowers.

COREOPSIS ROSEA. 8 to 12 inches. July to September. Rosy-pink, yellow center. Dark green cut-leaf foliage. Interesting foreground plant.

COREOPSIS VERTICILLATA. 2 feet. July to September. Rich golden yellow.

M 0 N UR SE D T N R I Е S N

An attractively arranged Rose Garden, so designed as to become an integral part of the home and planted so as to be effective thruout the entire season

Hardy Roses.

HOICE HARDY GARDEN ROSES are a special feature of our business, many thousands of them being sold annually. Most experienced buyers of roses prefer strong, field grown stock, all ready to make a good showing of both vigorous growth and blossoms. This is the only grade we offer.

Hybrid Tea and Other Perpetual Blooming Roses.

These roses are the product of crossing the hybrid-perpetual-roses with the tender tea-roses. They are, as a class, not so strong growers as the hybrid-perpetuals, and not quite so hardy to extremes of winter, but will repay any extra care they may demand for protection. The flowers have all the refinement of the tea-roses in color, texture and fragrance, and bloom quite freely during the summer.

VARIETIES.

Caroline Testout. Large. Clear bright rose Very sweet. color.

Gruss an Teplitz. Color searlet shading to velvety crimson, very fragrant.

Hoosier Beauty. A very strong grower, rich crimson with dark shadings.

Kaiserin Augusta Victoria. Soft creamy white, shaded pink at center.

Killarney. A charming pink rose.

Laurent Carle. Brilliant velvety carmine, large, very free.

Maman Cochet. Large, full, clear carmine.

Mrs. A. R. Waddell. Rosy salmon in bud opening to golden yellow.

Ophelia. A clean, vigorous grower, salmon pink shaded with rose

Pharisaer. Large flower, rosy white with salmon shading.

Radiance. An abundant bloomer, silvery flesh color shaded to copper red.

White Killarney. A pure white variety of the now well-known Killarney.

White Maman Cochet. Pure white, tinged pink. Willowmere. Vigorous grower, coral bud and carmine flower.

PRICES of above Roses, Strong, 2 years old, field-grown, \$1.00 each, \$9.00 per 10.

Roses, Native Species, Etc.

For Mass Planting and Shrubbery Borders

VARIETIES.

Blanda. Single pink. Showy bright red fruits in fall. Crimson twigs.

Lucida. Dwarf, native, rose-pink. Foliage beautiful autumn coloring.

Lucida var. White. Attractive pure wanted

Rugosa. Beautiful rosy-red. Large berries of a

rich orange-red color.

Rugosa var. White. Single pure white flowers highly scented; a splendid shrub-like rose.

Spinosissima. (Scotch). Single pure white flowers followed by attractive black fruits. Dainty foliage.

PRICES of the six preceding, Strong, 2 years old, field-grown, 50 cents each, \$4.00 per 10. \$30.00 per 100. - 35 ---

THE ELM CITY NURSERY COMPANY

Hybrid Perpetual Roses.

This splendid class of vigorous, hardy roses is the result of crossing the favorite old garden roses with the less vigorous and less hardy tea roses. This crossing has resulted in producing a race of roses which not only bloom freely at the usual rose scason, but at intervals during the summer and fall. Such favorites as the General Jacqueminot, etc., belong to this class. If restricted to a few garden-roses, one can safely select them from among the Hybrid-Perpetual class.

VARIETIES.

Alfred Colomb. Brilliant crimson. Very large

full form Extremely fragrant.

Anne De Diesbach. (Syn. Glory of France.)

Carmine, a beautiful shade; very large. A superior variety.

Baron De Bonstetten. Rich velvety maroon; large full. A splendid sort.

Captain Hayward. Crimson-carmine, large, full,

very fine.

io. Flowers large, of fine globular form, flesh color, shaded in the center with rosy-pink; Clio.

growth vigorous.

Fisher Holmes. Rich crimson, shaded scarlet.
Large, full, and very free.

Frau Karl Druschkii. Flowers very large, beautiful, pure white. One of the best white hybrid perpetuals.

General Jacqueminot. Brilliant crimson; not full, but large and extremely effective; fragrent excellent habit.

grant, excellent habit.

George Arends. A seedling of Frau Karl Druschkii with the same free blooming qualities. Delicate rose-pink.

Hugh Dickson. Crimson shaded with scarlet, large and full.

J. B. Clark. Scarlet, shaded with crimson, vigorous grower.

Madame Gabriel Luizet. Pink, distinct, very

large, cup-shaped.

Magna Charta. Pink, suffused with carmine; full globular.

Marshall P. Wilder. Large, well formed; color cherry-carmine.

Mrs. John Laing. Soft pink; produced on strong stems.

Paul Neyron. Deep rose color; by far the largest variety in cultivation.

Ulrich Brunner. Brilliant cherry-red, a very effective color.

PRICES of above Roses, Strong, 2 years old, field grown, 85 each; \$7.50 per 10

Other Choice Hardy Garden Roses.

These are mostly the old garden favorites.

VARIETIES.

Blanche Moreau (Moss). Pure white, large, full, and of perfect form.

Conrad F. Meyer. Large, silvery-pink flowers, very full with delicate perfume.

Damask. Popular old-time rose of delightful

fragrance and delicate, almost tea-rose-like delicacy in the opening buds. Pink.

Harrison's Yellow. Golden-yellow, medium size, semi-double. A free bloomer.

Juliet. The outside of petals an old-gold, inside rosy-red

Madam Plantier. Pure white. Produced in great abundance; vigorous, bushy habit.

Nova Zembla. This is a pure white, beautifully formed rose, very fragrant, vigorous and free blooming.

Persian Yellow. Bright yellow, small, nearly full.

Salet (Moss.) Deep pink colored buds surrounded with a mossy fringe and crest. A fragrant and very beautiful moss rose.

White Bath. White moss.

York and Lancaster. Handsome large semi-double blooms, splashed and striped bright red, white and yellowish tints.

PRICES of above Roses, Strong, 2 years old, field grown, 85 each; \$7.50 per 10.

Baby Rambler and Hybrid Polyantha Roses.

These dwarf bushy roses have many uses. Hardy and continuously in bloom throughout the entire growing season, they offer great opportunities. These little roses are very useful as a border or foreground in beds, or borders of taller growing sorts, for low hedges of brilliant color, and for planting in groups in the herbaceous garden, etc.

VARIETIES.

Aennchen Muller. Brilliant carmine-pink. Baby Dorothy. Dwarf rose with large clusters of blooms, same color as the popular variety Dorothy Perkins.

Baby Rambler. Dwarf rose with great clusters of blooms of same color as Crimson Rambler.

Blooms all summer. Baby Tausendschon. (Louise Walter). Flowers large and semi-double of flesh-pink color. Shadings identical with the popular climbing Tausendschon.

Clothilde Soupert. Very double, pearly-white.

Erna Teschendorff. Flowers vivid crimson.
Very free. One of the brightest of this type.
Jessie. Cherry-red with white center. Very free bloomer. Compact habit.

Orleans. Deep geranium-red with a showy center of white, large truss. One of the most desirable of the dwarf polyanthas.

White Baby Rambler. (Katherine Zemet).

White, very free and continuous bloomer. Compact habit.

Yvonne Rabier. Pure white, full and free bloomer. Clean foliage. Strong grower.

PRICES of the above Roses, Strong, 2 years old, field grown, \$1.00 each, \$9.00 per 10.

D M 0 T IJ R E R I E S N

An attractive city garden where climbing Roses have been effectively used.

Rambler Roses and other Hardy Climbing Roses.

VARIETIES.

American Pillar. Vigorous grower. clear pink.

Baltimore Belle. Pale blush, becoming nearly white; compact and fine.

Christine Wright. A bright wild-rose-pink.

Blooms produced singly and in clusters. Vigorous grower.

Climbing American Beauty. Vigorous grower, hardy, blooms very large and full, color rosy-

Crimson Rambler. This wonderful Japanese Rose is one of the most important and valu-

able acquisitions of recent years.

Dorothy Perkins. Very double and are borne in clusters of ten to twenty. The color is a clear shell-pink.

Dr. Van Fleet. Flowers full and double, of a delicate flesh pink. Desirable for cutting.

Known as the Red Dorothy Perkins, very full blooms of crimson-maroon, tips of petals scarlet.

Hiawatha. Single, bright ruby-red, white center

with dark yellow anthers.

ady Gay. Similar to the popular Dorothy Perkins, but lighter in color.

Multiflora. A charming species. Great clusters of white single flowers, showy red fruits which last all winter.

Philadelphia Rambler. The blooms are larger than the Crimson Rambler and full to the

center and of a deeper erimson color.

Prairie Queen. Bright rosy-red, extra. Setigera. The Michigan or Prairie Rose. Large single flowers of a deep rose color.

Silver Moon. Very large, vigorous grower, semi-double, white blooms, with golden stamens in

Sweet Brier. Old favorite, fragrant foliage.

Tausendschon, or Thousand Beauties. Charming, strong grower. Flowers in large clusters varying from, creamy-pink to bright red, all in the same cluster.

Trier. Creamy-white with dark yellow anthers and are borne in large elusters.

White Dorothy. Same habits of growth and freedom of flowering as Dorothy Perkins, but with pure white blooms.

Wichuriana. Memorial rose, trailing species, pure white, single.

William C. Egan. Bloom is large, very full, elear flesh color.

PRICES of above Roses, 2 years, Strong field grown, 75 each, \$6.00 per 10.

DISTANCE APART TO PLANT ROSES. Rose gardens are usually most effective when planted in beds or borders wide enough to allow for at least three rows of plants. If planted in beds seven feet wide this allows for three rows set 2½ feet apart and a margin of a foot for outside borders. A rose bed ten feet long and seven feet wide will call for one dozen roses if planted 2½ feet apart each way. A rose bed twenty-five feet long requires thirty plants. It is desirable to place the strongest growing varieties in the center row. If the border is in the foreground of a fence, wall or other dividing line, the strongest growing roses should be planted. the strongest growing roses should be planted in the back row, also climbing roses should be planted in the background about six feet apart, and trained over some support. This will add to the effect and the climbing roses will not interfere with the others. It is desirable, when a number of roses are used, to plant enough of each kind in a group to produce a solid effect of color.

If desiring advice on Rose-Gardens, we will be glad to have you inquire of us. We are sure we

can assist you.

CITY NURSERY THE ELM COMPANY

Fruit Department.

RUIT growing on a large scale is one of the country's profitable industries. The fortunate few who have large orchards of bearing apples and other fruit trees, which have been properly cared for, are now reaping rich rewards. No part of the United States offers better opportunities than New England for the producing of highly flavored and richly colored fruit. In a lesser way, the home acre and the smaller city garden, offer opportunities for the producing of an abundant crop of fruit which should not be neglected. Aside from the utility feature, there is the genuine pleasure, delight and healthful recreation which is a reward for those who set out and care for a few trees, vines, and hearty plants. berry plants.

Apples.

Summer Varieties.

Devonshire Quarrenden. Early, red. August and September. Duchesse, Medium, yellow, streaked, juicy. August to September. Early Harvest. Pale yellow, tart, tender, with a fine flavor. d.S.

S.

EHUBARB. Leaf stalks large, tender, juicy, produced quite early. 25 cents each; \$2.00 per 10. Larger roots, 35 cents each; \$3.00 per 10.

E

Box-Barberry used to border a formal garden at Red Banks, N. J.

Box-Barberry.

The New Hardy Edging and Dwarf Hedge

BOX-BARBERRY is a new dwarf, upright and compact form of the popular Berberis Thunbergii, or Japan Barberry. It is perfectly hardy, thriving anywhere the latter will grow and does not carry wheat rust. Send for Booklet "What others have to say about BOX-BARBERRY."

In introducing Box-Barberry, we offer, to the lover of plants, something entirely new for edging and low hedge purposes. Not only will Box-Barberry successfully take the place of the box border in leading the property of the goarden by

in localities where Boxwood is not hardy, but it gives an additional autumn charm to the garden by

changing the color of its foliage from a pleasing green to yellows and rich reds. When planted from four to six inch centers and kept closely trimmed, Box-Barberry forms most attractive edgings for borders and formal gardens. It also makes a beautiful low hedge when set from six to twelve inches apart, and can be planted as a foreground shrub, or trimmed into formal

specimens.

Ibolium, the hardy Privet you have long been waiting for.

- 2 year, field grown, \$0.35 each; \$2.50 per 10; \$15.00
- 2 year, field grown, \$0.35 each; \$2.50 per 10; \$15.00 per 100; \$150.00 per 1,000.

 3 year, field grown, \$0.50 each; \$4.00 per 10; \$30.00 per 100; \$250.00 per 1,000.

 4 year, field grown, \$0.75 each; \$5.00 per 10; \$40.00 per 100; \$350.00 per 1,000.

 Large specimen plants, \$1.50 cach; \$12.00 per 10; \$100.00 per 100.

Ibolium Privet. The New Hardy Hedge Privet

Another introduction of ours. A cross between Ibota and Ovalifolium. This new hybrid possesses the attractive characteristics of California Privet,

with the hardiness of Ibota.

The original plant, now standing in our nurseries, is ten years old. All stock propagated from it has remained uniformly vigorous, developing no constitu-tional weakness, or susceptibility to blight or disease. It is upright in its habit, with glossy, round foliage, and fills out even fuller at the bottom than does the California Privet.

Plants ready for delivery Fall 1921. One year old plants, 10-15 inches, \$15.00 per 100. Two year old plants, $1\frac{1}{2}$ -2 feet, 25.00 per 100. 25.00 per 100.

Transplanting Directions.

Preparing the Soil.

No one thing is of more importance to the ultimate development of plants than thorough preparation of the soil. When the natural soil is of a poor quality, replace to a depth of about two feet with a good grade of loam. For a single plant, dig out a hole twice as large as is really necessary to contain its roots. When group plantings are to be made, dig out the whole area. Well rotted manure may be mixed into the soil to good advantage, but always avoid the use of fresh manure in contact with roots of a plant. The problem of drainage must be considered. If the natural drainage is poor, artificial drainage must be made.

Planting.

At the time of planting, most plants need a little shaping, both of tops and roots. Since a por-At the time of planting, most plants need a little snaping, both of tops and roots. Since a portion of the root system has been cut away in digging, a corresponding portion of the top should be removed. It is best to retain the general shape of the plant, cutting away any weak or injured branches and about one-third of the previous year's growth from the end of each branch. Evergreens and stock dug with a ball of earth are exceptions. The root system should be examined and all split or

bruised roots removed with a diagonal cut.

Be careful not to set the plant too deep, for injury is sure to follow. Place the plant a little deeper than the point at which it is to remain, and carefully spread out all the roots (plants dug with a ball of earth excepted), now shovel in the earth until the roots are covered about two inches. the plant up and down until the soil settles in well and no cavities remain. Throw in more earth and with a blunt stick work well in under the roots. Press down the soil with a firmer or the foot, beginning at the center of the plant and working out. When the hole is filled to within three or four inches of the top, pour in two or three pailfuls of water. Allow this to disappear, and then fill the hole, leaving a slight depression around the plant.

leaving a slight depression around the plant.

In planting evergreens or other plants dug with a ball of earth, care should be taken to prevent breaking the ball. Place the plant in the hole so that the top of the ball is not more than one inch below the level of the ground. Put in enough soil to hold the plant firmly in place. Do not remove the burlap covering from around the ball, but rip it at the top and down the sides in about three places and crowd to the sides of the hole. Fill up as described above.

Watering and Mulching.

After a plant has been set in the ground it should be mulched with manure, leaves or lawn clippings to prevent evaporation of the soil's moisture. When mulching is unsightly or not practical occasional watering and frequent loosening of the soil serves a similar purpose. The ground around plants should never be allowed to become dry and if there is not sufficient rain, artificial watering should be supplied.

After Care.

It is our earnest desire to assist all lovers of trees and other plants, from a practical standpoint by helping them to attain desired results. Many plantings never receive the after care they require. This applies more especially to home foundation and other intensive plantings of both evergreens immediate effects. Unless these plantings are trimmed consistently from season to season, they soon lose their original attractiveness and become ragged and overgrown, whereas if they are given proper care, they improve in appearance from season to season and can be kept within any required limitations.

Deciduous shrubs should be pruned so as to remove a portion of the old wood each year, saving the new growth. By this method each plant is entirely renewed every few years. Judgment must be used in pruning so that as much of the blossoming wood as possible will remain. This refers especially to Spiraeas, Forsythia, Japan Quince, etc. Such shrubs as Hydrangeas, Altheas and most roses, bloom on the new growth and are improved by pruning before the spring growth begins.

A little mid-summer pruning is often advantageous, especially where plants are becoming unshapely or are overgrown. Massed plantings of evergreens need careful pruning and shaping each season, otherwise the stronger growers will overcrowd the others. This trimming can be done to season, otherwise the stronger growers will overcrowd the others.

advantage just before the new growth starts in the spring.

These brief instructions are only intended to give a few simple pointers. Write to us freely if you have any garden problems which are causing you anxiety. With our wide experience it is probable that we can help you.

Protection.

It is advisable to stake a newly planted tree in locations where the wind blows severely. The continued shaking of the tree prevents the little rootlets from getting a hold in the soil and often results in failure of a plant to grow.

Suitable guards should be provided for all trees planted where exposed to horse bites, hub scars

and similar injuries.

UR M S Ε

Important to Purchasers.

Packing.

Prices in this catalog are for nursery stock at the Nursery carefully dug and roots suitably protected. Many purchasers are finding it both an economy and convenience to call at the Nursery for their stock. On freight or express shipments when stock is purchased at 100 or 1,000 rates or in case of large bulky stock requiring special baling or boxing for safe transportation, a charge will be made sufficient to cover the cost of packing. No charge is made for packing on shipments of small and medium sizes when purchased at single or ten rate prices. Small sizes of general nursery stock, roses, herbaceous plants, etc., can often-times be sent by parcel post. In such cases we will prepay and bill postage to purchaser.

Shipping.

We make no charge for delivery to local freight and express companies from which point our responsibility for safe delivery ceases and complaint, if any, should be made direct to the transportation company. We make no charge for delivery of purchases in the city of New Haven.

Auto delivery is advised where order amounts to truck-load quantities for Connecticut and nearby points in Massachusetts, Rhode Island and New York. Charges for which depend upon size of load and distance to destination. A number of less than truck-load orders can often be grouped together along the same route and delivered at a single auto run. In this case delivery charges will be equitably divided. There are no packing charges on stock delivered by auto.

Terms.

Orders from parties unknown to us should be accompanied by remittance or satisfactory references. All accounts are due when bills are presented, and prompt payment is expected. Customers remitting within ten days from date of invoice may deduct 2\% discount.

Single-rate prices are for less than five of a kind.

Ten-rate prices are for five or more, and less than twenty-five of a kind.

Hundred-rate prices are for twenty-five or more, and less than 250 of a kind.

Thousand-rate prices are for 250 or more of a kind.

Trees and Plants individually selected at our nurseries, will be charged for according to quoted price at time of selection.

Prices in this Catalog supersede previous catalog quotations and are subject to change without notice, owing to conditions not within our control.

WHILE we exercise the greatest care to have all the Trees, Shrubs, and Plants, etc., genuine and believe them to be true to label and hold ourselves prepared to refund the purchase price or replace on proper proof all that prove untrue, we do not give any warranty, express or implied: and in case of any error on our part, it is mutually agreed between the purchaser and ourselves that we shall not at any time be held responsible for a greater amount than the original price of the goods.

(Signed) THE ELM CITY NURSERY CO.

Woodmont Nurseries, Inc.

Please Read This.

The nature of the nursery business is such that we cannot assemble and prepare an order for a purchaser without having been given a reasonable amount of time. This is especially true in the spring and fall as these are the busiest times in our packing department. On large orders please give us as much leeway as possible before shipping date. On small orders we cannot agree to have them ready to be called for in less than twenty-four hours notice.

Visitors are always most cordially welcome. During the spring and fall there are short intervals, however, when it is quite impossible for us to devote much time to showing parties about the nursery, as these are the most strenuous shipping periods of the entire year. No business transacted on Sunday.

How To Reach Us.

Our nurseries and office are located at EDGEWOOD, Edgewood Avenue, near the New Yale Bowl, just beyond Edgewood Park. Auto via Edgewood Avenue or West Chapel Street. Edgewood Trolley cars direct to Nurseries.
